Managed Print Solutions

Smart. Simple. Secure.

Automated Film Deliveries and Analytic Insights

SMART IMAGING SOLUTIONS

No shortages. No ordering. No worries.

Automated film replenishment with CARESTREAM Managed Print Solutions (MPS) frees your radiology staff to focus on serving patients and providing superior care — rather than worrying about film shortages or ordering film. Our MPS team takes responsibility for everything from monitoring and delivering consumables to providing the latest DRYVIEW imaging equipment and software updates.

Smart, Strategic Print Management

Following an analysis of your printing infrastructure, Carestream provides your radiology facility with a strategic print-management plan customized to your needs, including:

- A DRYVIEW Laser Imager matched to your printing environment
- Automatic replenishment of DRYVIEW Laser Imaging Film
- Access to our exclusive MPS web portal that simplifies management and analytics
- Dedicated customer service support for the term of the agreement
- User demonstration and training
- Solid security and data protection

Advantages at a Glance

- No film shortages with automated film replenishment
- Turnkey solution
- No capital investment
- Reduced operational and administrative costs over time
- Easy, convenient access to equipment and film details through web portal
- Convenience of electronic payments
- Security and data protection
- World-class service and support
- Connected by Smart Link remote technology

All Your Data in One Place

A key component of the CARESTREAM MPS program is our exclusive web portal that empowers radiology facilities to see all of its imager and film data conveniently in one place. It eliminates surprises and the administrative overhead of managing film use, tracking inventory, procurement and billing. You can also view your contract, replenishment plans, film shipment status, equipment and service details and download data for further analysis through this convenient portal.

All of this is made possible with our CARESTREAM Smart Link remote technology that securely tracks and displays your data on a dashboard that's accessible to you anytime, anywhere.

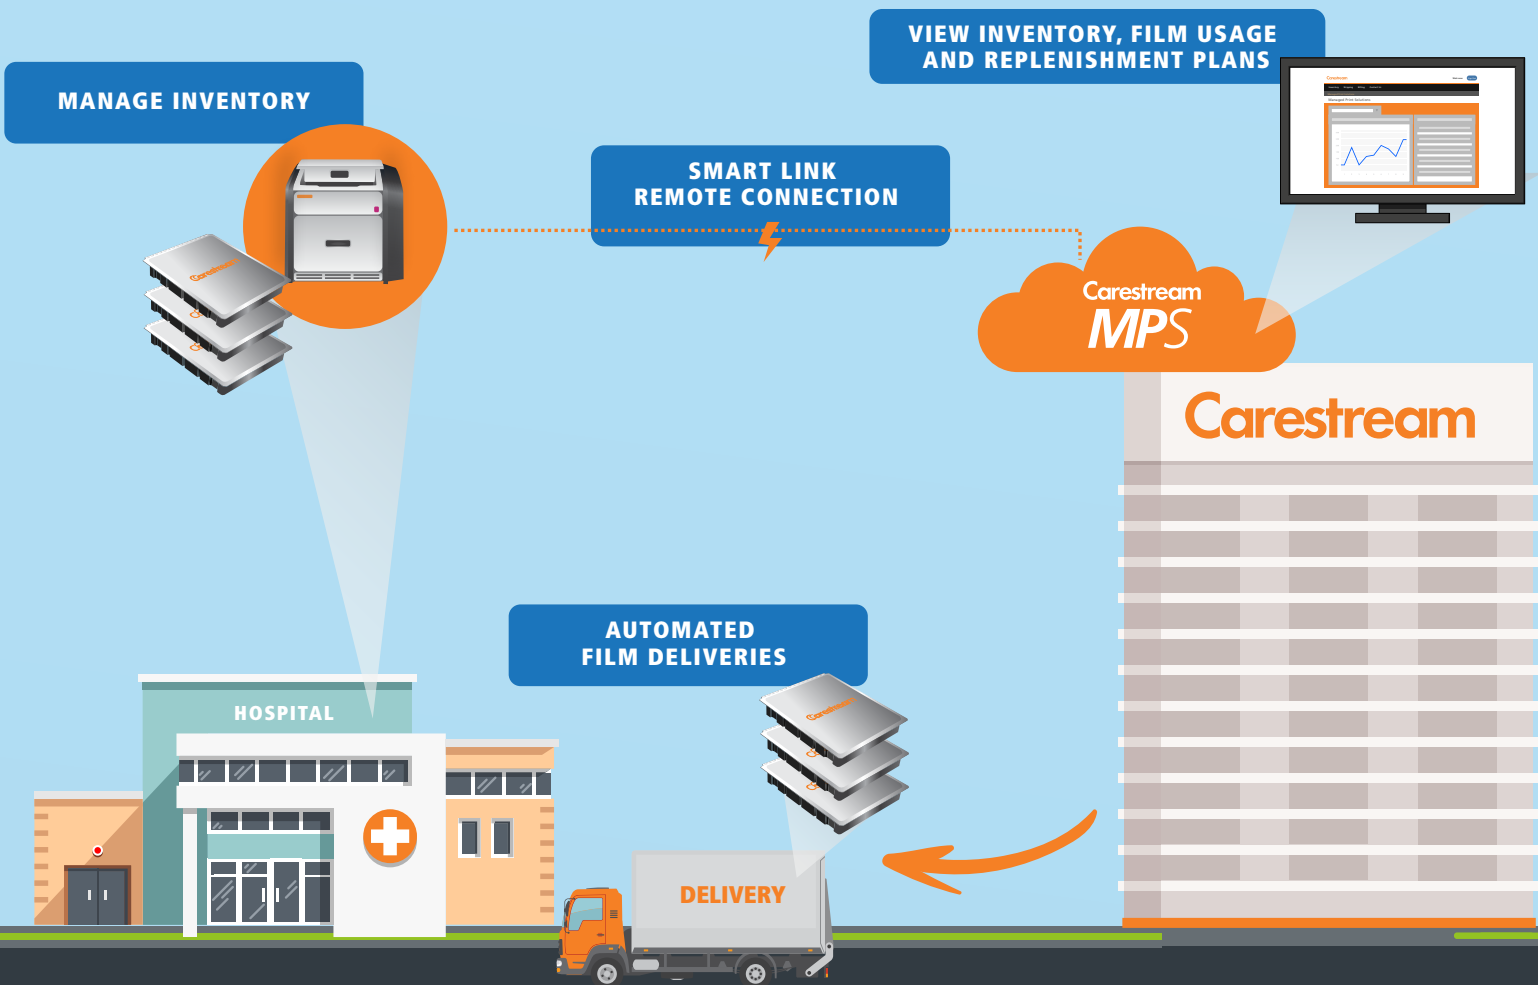

IoT Empowers Smarter, More Connected Healthcare

Healthcare is in the midst of a transformation. There are millions of medical devices connected to and monitoring various parts of the body to inform healthcare decisions. Some hospitals are already using IoT technology for inventory management and workflow optimization in diagnostic imaging.

That's where CARESTREAM MPS comes in. MPS drives workflow innovation with automated film replenishment. With MPS, your laser imaging film use and inventory levels are monitored and film is delivered when you need it — saving you time.

HOW MANAGED PRINT SOLUTIONS WORKS

Save Time and Costs

The MPS program is designed to keep your imagers up and running so you can focus on patients. With all-inclusive pricing, no capital investment and a pay-as-you-go structure, MPS gives you the power to reduce your operational costs over time. MPS eliminates:

- Costly expedited film shipments
- Unplanned costs for service and part replacement requests
- Time wasted generating repetitive purchase orders
- Administrative costs for ordering and managing film supplies

Smart, Simple — and Secure

With CARESTREAM MPS, no confidential patient data is ever transmitted or received. We employ globally accepted Internet security protocols and only trained, properly credentialed Carestream Support Specialists are permitted to connect with your printer.
